FOOD IN A PERFECT SHAPE

ATTENTION TO THE ENVIRONMENT

Increasing attention to the environment has led to the development of **products in compostable material**.

In evaluating these materials, the crucial factors to be taken into consideration are their **resistance to liquids, their thermal resistance and their adaptability to industrial applications**.

THE CUKI PROFESSIONAL SOLUTION

To meet these requirements and with the aim of paying particular attention to environmental protection, **Cuki Professional has developed a new type of compostable material based on Polylactic Acid (PLA)** developed on the basis of a specific **process of compounding granules** obtained from products of **natural origin**. Cuki Professional has therefore launched a **line of certified compostable trays**, ideal for **flow-pack and heat-sealing packaging systems in a protective atmosphere** and suitable for the processes of **hot filling, pasteurisation and heating in the microwave**.

Made of compostable material based on Polylactic Acid (PLA)

100% Compostable: EN 13432 Compostability Certification

Authorised by the Italian Composting Consortium (C.I.C.) to use compostable logo

High heat resistance in traditional and microwave ovens

Suitable for use in microwave ovens

Barrier effect superior to PET containers

Flow-pack, heat-sealing, hot-filling, pasteurisation and heating in a microwave oven
